Introduction

Educator and AI researcher with 15+ years of teaching experience at undergraduate and postgraduate levels in computer systems engineering. My teaching practice covers subjects concerning foundational computing concepts to research-informed emerging AI technologies. My research spans human motion generation and diffusion-based synthesis, privacy-preserving federated learning, encrypted traffic classification, large language models, agentic AI, and secure AI systems. I focus on designing adaptive, trustworthy, and scalable learning frameworks for non-stationary environments, including transformer-based mixture-of-experts architectures, lifelong encrypted traffic classification, and LLM-guided generative models for human motion and healthcare-oriented digital avatars.
