ABOUT MYSELF

Computer Systems Engineering graduate specializing in AI, ML, and Data Analytics. Skilled in Python with strong teaching experience in Computer Programming. Currently a Research Assistant at MUET's Computer Systems Department, assisting in teaching and departmental academic activities.

EDUCATION & TRAINING

[18/01/2021 - 20/12/2024]

BE Computer System's Engineering

Mehran University of Engineering and Technology <https://www.muett.edu.pk/>

City: Jamshoro | **Country:** Pakistan | **Final grade:** 3.39

WORK EXPERIENCE

Mehran University of Engineering and Technology

City: Jamshoro | **Country:** Pakistan | **Email:** zoha.memon@teachers.muett.edu.pk

[04/08/2025 - Current]

Research assistant

- Instructing Computer Programming and Principles of Programming (theory and practical) to undergraduate students.

Growth Soft

City: Hyderabad | **Country:** Pakistan

[05/05/2025 - 29/08/2025]

Content Researcher & Analyst

- Analyze audience engagement graphs and trends to provide insightful content recommendations on specific shows, supporting strategic planning for the team at Growth Soft.

MUET FM 92.6

City: Jamshoro | **Country:** Pakistan

[03/04/2023 - 28/07/2023]

Web Developer Intern

- Worked as a front-end developer, enhancing the website's looks and functionalities using HTML, CSS, JavaScript, ReactJS, and Node.js.

SKILLS

Python | Python - Numpy, Pandas | Matplotlib, seaborn | Python (Tensorflow and Keras) | Deep Learning frameworks: PyTorch, Tensorflow, Keras | NLTK+Spacy | Scikit-learn | Object Detection (SSD & YOLO) | SQL | HTML / CSS / JavaScript | React.js | Node.js | NodeJS, Express.js | NoSQL Databases (MongoDB) | Git/Github, Docker, Gitlab

PROJECTS

[04/03/2024 - 29/11/2024]

Default Detection in Solar Plates Using Deep Learning (FYP)

YOLOv9 | YOLOv10 | R-50 FASTER R-CNN | DETECTRON2 | INFRARED IMAGING | REAL-TIME FAULT DETECTION

- Developed a web-based platform for detecting defects in solar panels using deep learning models like YOLOv9, YOLOv10, and R-50 Faster R-CNN (Detectron2). The platform processes infrared imaging data to classify solar plates as faulty, normal, or not faulty. Integrated real-time monitoring and analytics features YOLO models, Detectron2, Web Application, and Real-time Fault Detection.

Sentiment Analysis on Twitter Data

NODE.JS | NEXT.JS | OPENAI API | EXPRESS.JS | MONGODB | REACT | TAILWIND CSS

- In the sentiment analysis project on Twitter data, we first preprocessed tweets by removing noise like URLs, hashtags, and emojis. Then, using NLTK's VADER, we classified tweets into positive and negative

sentiments. Further, we utilized TF-IDF vectorization to extract important unigrams, bigrams, and trigrams from both positive and negative sentiment tweets, visualizing them with word clouds to showcase prevalent themes and sentiments in the dataset.

Parkinson's Disease Prediction Using Machine Learning

PANDAS | NUMPY | SCIKIT-LEARN | SVM | DECISION TREE | LOGISTIC REGRESSION | GRADIENT BOOSTING | MATPLOTLIB

- Developed a system to predict Parkinson's disease using models like SVM, Decision Tree, Logistic Regression, and Gradient Boosting. Implemented data preprocessing, feature scaling, and model evaluation with hold-out and cross-validation methods. Visualized correlations and model accuracy using heatmaps and bar charts, achieving high accuracy for early detection.

LANGUAGE SKILLS

Mother tongue(s): Urdu

Other language(s):

English

LISTENING: C1 **READING:** C1 **WRITING:** B2

SPOKEN PRODUCTION: B2 **SPOKEN INTERACTION:** B2

PUBLICATIONS

[2026]

Fault Detection in Solar Plates Using Deep Learning
